

Software Requirements Specification

Untitled App

Project ID: SRS-UNTITLED-APP | Status: approved | Generated: 2026-04-24

1. Introduction

This document defines the functional and non-functional requirements for Untitled App.

A school management app for teachers to assign tasks, parents to receive alerts, and administrators to export IEEE SRS documents.

2. Core Features

FEAT-001 - Teachers assign tasks

The platform provides teachers assign tasks as part of the main workflow.

REQ-011: The system shall support teachers assign tasks through the primary interface.

REQ-012: The system shall display teachers assign tasks history and status to authorized users.

FEAT-002 - parents get alerts

The platform provides parents get alerts as part of the main workflow.

REQ-021: The system shall support parents get alerts through the primary interface.

REQ-022: The system shall display parents get alerts history and status to authorized users.

FEAT-003 - admins export an IEEE SRS

The platform provides admins export an ieee srs as part of the main workflow.

REQ-031: The system shall support admins export an ieee srs through the primary interface.

REQ-032: The system shall display admins export an ieee srs history and status to authorized users.

FEAT-004 - Structured SRS generation

The platform provides structured srs generation as part of the main workflow.

REQ-041: The system shall support structured srs generation through the primary interface.

REQ-042: The system shall display structured srs generation history and status to authorized users.

FEAT-005 - JSON and PDF artifact export

The platform provides json and pdf artifact export as part of the main workflow.

REQ-051: The system shall support json and pdf artifact export through the primary interface.

REQ-052: The system shall display json and pdf artifact export history and status to authorized users.

FEAT-006 - Notifications and status updates

The platform provides notifications and status updates as part of the main workflow.

REQ-061: The system shall support notifications and status updates through the primary interface.

REQ-062: The system shall display notifications and status updates history and status to authorized users.

3. Validation Summary

Status: ready | Completeness: 100
