

Software Requirements Specification

Untitled App

Project ID: SRS-UNTITLED-APP | Status: approved | Generated: 2026-04-24

1. Introduction

This document specifies the functional and non-functional requirements for a web-based to-do application, providing a complete specification for development, testing, and implementation.

A browser-accessible task management application that enables users to create, organize, and track tasks with calendar integration, email notifications, and cloud storage capabilities.

2. Core Features

FEAT-001 - Task Management Core

Core functionality for creating, editing, and organizing tasks with due dates and priorities

REQ-011: Users shall be able to create new tasks with title, description, due date, and priority level

REQ-012: Users shall be able to organize tasks by categories, priorities, and due dates

FEAT-002 - Authentication System

Secure user registration and login system using email and password authentication

REQ-021: New users shall be able to register using email and password with validation

REQ-022: Registered users shall be able to login using email and password credentials

FEAT-003 - Notification System

Comprehensive notification system providing in-app alerts and email updates

REQ-031: System shall display task reminders and updates within the application interface

REQ-032: System shall send email notifications for important task events and reminders

3. Validation Summary

Status: ready | Completeness: 100
