

# Software Requirements Specification

## General answer

Project ID: SRS-GENERAL-ANSWER | Status: approved | Generated: 2026-04-24

### 1. Introduction

This document defines the functional and non-functional requirements for General answer.

A healthcare platform for patients to upload medical reports, answer guided questions, and automatically generate an IEEE SRS document, primarily for hospital administrators.

### 2. Core Features

#### FEAT-001 - Multimodal project intake

The platform provides multimodal project intake as part of the main workflow.

REQ-011: The system shall support multimodal project intake through the primary interface.

REQ-012: The system shall display multimodal project intake history and status to authorized users.

#### FEAT-002 - AI-guided requirement interview

The platform provides ai-guided requirement interview as part of the main workflow.

REQ-021: The system shall support ai-guided requirement interview through the primary interface.

REQ-022: The system shall display ai-guided requirement interview history and status to authorized users.

#### FEAT-003 - Structured SRS generation

The platform provides structured srs generation as part of the main workflow.

REQ-031: The system shall support structured srs generation through the primary interface.

REQ-032: The system shall display structured srs generation history and status to authorized users.

### 3. Validation Summary

Status: ready | Completeness: 100
