

Software Requirements Specification

Untitled App

Project ID: SRS-UNTITLED-APP | Status: approved | Generated: 2026-04-24

1. Introduction

This document specifies the functional and non-functional requirements for the Task Manager application, serving as a complete specification for development, testing, and implementation.

A web-based task management system that enables users to create, organize, and track tasks through an intuitive dashboard interface with email integration for notifications.

2. Core Features

FEAT-001 - User Authentication System

Secure login and account management system using email and password credentials

REQ-011: System shall allow new users to create accounts using valid email addresses and secure passwords

REQ-012: System shall authenticate users using registered email and password combinations

FEAT-002 - Task Dashboard

Comprehensive overview of user tasks with visual indicators and quick access to task management

REQ-021: System shall display all user tasks with status, priority, and due date information

REQ-022: System shall allow users to filter and sort tasks by various criteria including status, priority, and due date

FEAT-003 - Task Management

Complete functionality for creating, editing, and managing individual tasks

REQ-031: System shall allow users to create new tasks with title, description, due date, and priority

REQ-032: System shall allow users to modify existing task properties and attributes

FEAT-004 - Notification System

In-app notification system for task reminders and status updates

REQ-041: System shall display notifications within the application for task-related events

3. Validation Summary

Status: ready | Completeness: 100
