

# Software Requirements Specification

## Agent1 API Demo

Project ID: SRS-AGENT1-API-DEMO | Status: approved | Generated: 2026-04-24

### 1. Introduction

This document defines the functional and non-functional requirements for Agent1 API Demo.

Agent1 API Demo looks like a general product for Business users. The early scope points to multimodal project intake, ai-guided requirement interview, structured srs generation, json and pdf artifact export.

### 2. Core Features

#### FEAT-001 - Multimodal intake

The platform provides multimodal intake as part of the main workflow.

REQ-011: The system shall support multimodal intake through the primary interface.

REQ-012: The system shall display multimodal intake history and status to authorized users.

#### FEAT-002 - AI question flow

The platform provides ai question flow as part of the main workflow.

REQ-021: The system shall support ai question flow through the primary interface.

REQ-022: The system shall display ai question flow history and status to authorized users.

#### FEAT-003 - SRS export

The platform provides srs export as part of the main workflow.

REQ-031: The system shall support srs export through the primary interface.

REQ-032: The system shall display srs export history and status to authorized users.

#### FEAT-004 - Multimodal project intake

The platform provides multimodal project intake as part of the main workflow.

REQ-041: The system shall support multimodal project intake through the primary interface.

REQ-042: The system shall display multimodal project intake history and status to authorized users.

#### FEAT-005 - AI-guided requirement interview

The platform provides ai-guided requirement interview as part of the main workflow.

REQ-051: The system shall support ai-guided requirement interview through the primary interface.

REQ-052: The system shall display ai-guided requirement interview history and status to authorized users.

#### FEAT-006 - Structured SRS generation

The platform provides structured srs generation as part of the main workflow.

REQ-061: The system shall support structured srs generation through the primary interface.

REQ-062: The system shall display structured srs generation history and status to authorized users.

#### FEAT-007 - JSON and PDF artifact export

The platform provides json and pdf artifact export as part of the main workflow.

REQ-071: The system shall support json and pdf artifact export through the primary interface.

REQ-072: The system shall display json and pdf artifact export history and status to authorized users.

### 3. Validation Summary

Status: ready | Completeness: 100
